

# OFF-GRID EUROPE

Off-Grid Europe's Journey: Electrifying rural Senegal with Mini-Grids

11.10.2023

# OFF-GRID

GENERAL OVERVIEW

# OFF-GRID EUROPE FOUNDERS

**CHRISTIANE KRAGH**  
CEO and co-founder

Before founding Off-Grid Europe, Christiane had a successful 12-year career in international marketing and project management.

Under her leadership, the company transformed from Europe's top solar DIY retailer to a renowned provider of energy solutions.

Christiane also serves as Chairman of their subsidiary in Senegal, Off-Grid Africa. Further subsidiaries are in the pipeline.

**MARK KRAGH**  
CTO and co-founder

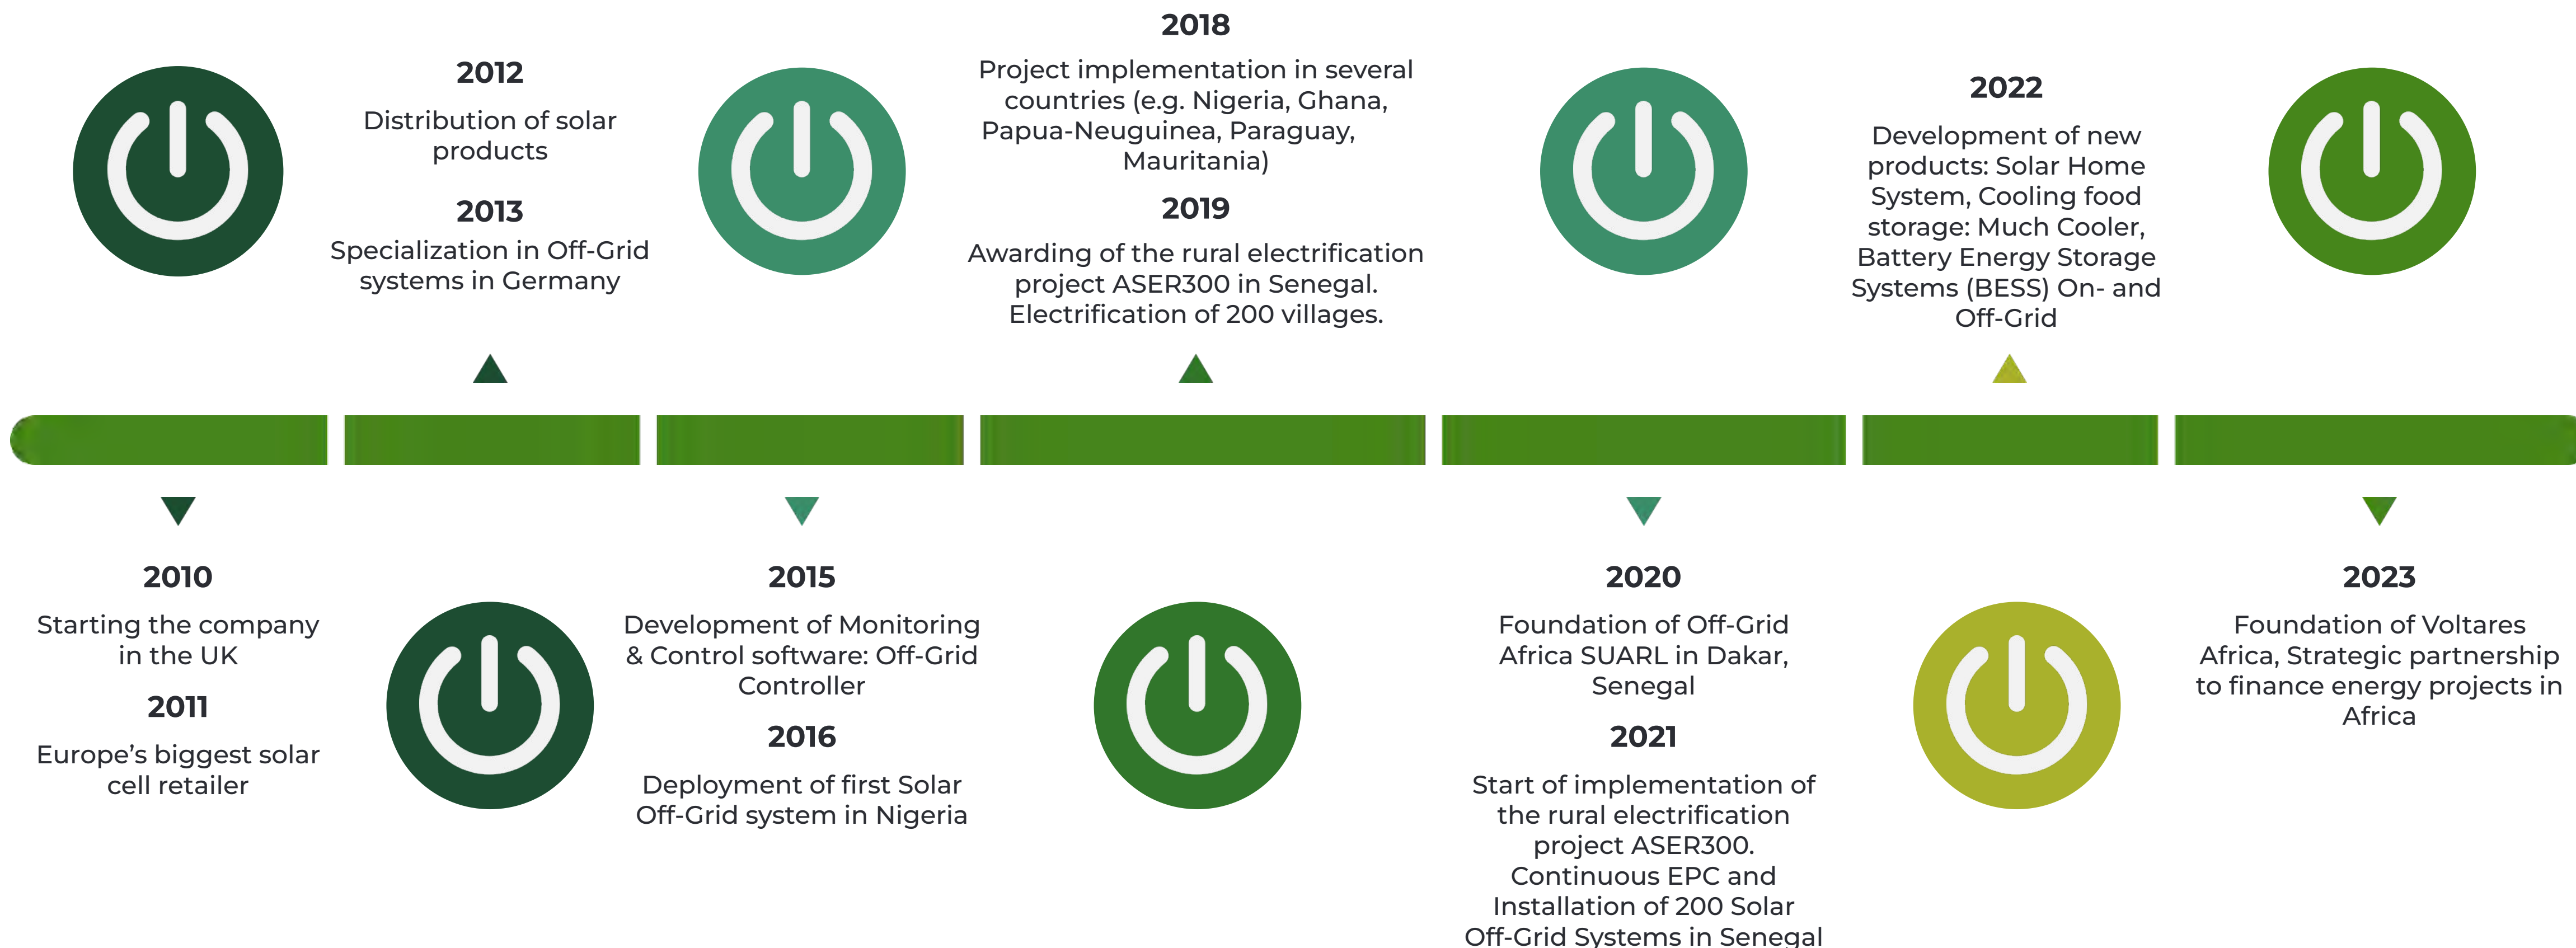

Mark is the founder and CTO of Off-Grid Europe. He is an expert in renewable energy systems with long-term experience in systems engineering and design, leadership, and data analytics.

Apart from Off-Grid Systems, Mark has developed an innovative solar boat (Sun Sailor) and a containerized solar oxygen solution (Solar O2).

He is currently working on a BESS for commercial use and a solar cooling solution for the agricultural sector (Much Cooler).

# OFF-GRID EUROPE HISTORY

# END-TO-END TURNKEY SOLUTION

## PLANNING

Evaluation of demand, analysis of return of investment, design, finance)

## MANUFACTURING & PRODUCTION

Engineering, containerized solutions, electronics, steel mounting structure: Sun Hat

## EPC

Engineering, procurement of equipment, construction, fast installation

## LOGISTICS

Packing, shipping, distribution

## MONITORING & CONTROL

Smart software solution, ensuring maximum lifespan

## OPERATION & MAINTENANCE

Operation, maintenance, securing optimal return of investment

## TRAINING

Local engineers and electricians, knowledge transfer

## PROJECT FINANCE

Financing options available

## RESEARCH & DEVELOPMENT

Continuous product iteration and improvement, development of new products

# OFF-GRID GROUP

## OFF-GRID EUROPE GMBH

- ▶ 25 employees
- ▶ Engineers, Electrical workers, Logistics, Administration, Marketing & Design, IT Developers etc.
- ▶ 16 nationalities

## OFF-GRID AFRICA SUARL

- ▶ 55 employees
- ▶ Engineers, Electrical workers, Administration, Health & Security, Installation Teams, Drivers etc.
- ▶ nationalities: mostly Senegalese but also neighbouring countries

# OFF-GRID EUROPE TEAM

# OFF-GRID AFRICA TEAM INSTALLATION

# HOW IT STARTED

PICTURE STORY TELLING BY A SUCCESSFUL ENTREPRENEUR

# 2010-12 Foundation of the company

# 2010-12 Attempting to start charitable solar business

A screenshot of the BBC News website. The main headline is "DIY solar panel maker heads to Africa for charity" dated 23 December 2011. Below the headline is a video player showing a man in a blue jacket standing in a room with solar panels. To the right, there are sections for "Top Stories" and "Features". The "Top Stories" section includes "LIVE Israel says Gaza finally secured as air strikes continue" and "No electricity, food, wa gas for Gaza, says Israel". The "Features" section includes "How festival massacre unfolded - from verification".

A screenshot of the BBC News Asia website. The main headline is "Christchurch earthquake: The moment it struck" dated 23 December 2011. Below the headline is a video player showing a scene of a market or street in Christchurch. To the right, there is a "Most watched/listened" section with a list of videos. The video "Making a phone charger from scrap" is circled in red. The list includes: "Polar bear cub taken into care", "Moment N Zealand quake struck", "US Navy women have first gay kiss", "Motorbike gang caught on camera", "Leaders honour Havel at funeral", "One-minute World News", and "Making a phone charger from scrap".

# 2012-15 Getting into bigger equipment and more valuable projects

# 2016-18

Project size continues to grow by the year

# OFF-GRID EUROPE

35 kWp

38 kWh

Client: KTI – Plersch.

## SENEGAL

Electrification of 22 banana farms with solar water pumps.

0,62 kWp 330 Ha.

ID BIO. Financing: Voltares Africa.

# How do you create success?

STEP BY STEP GUIDE OF SUCCESS

# WHAT DOES IT MEAN TO BE AN ENTREPRENEUR?

- The day you stop learning and developing is the day you stop being an entrepreneur and become a business owner
- You grow your network
- Have a vision and continue to develop it as you learn more
- You will never be satisfied with your achievements
- There is always more to find around the next corner
- Risk taking is an essential part of the game
- The faster you want to grow, the more risk you must accept
- Work with whatever you got, use your resources creatively
- Beg, steal, borrow is the tried and tested way to survive

# DO YOU REALLY KNOW WHAT YOU ARE SELLING?

- Understand if your customer wants what you are selling
- Understand if your customer understands that really they need what you are selling
- Don't work blindly on your products. Remember, your product will only be successful if it has a real application
- Don't expect your product to sell, even if it is exactly what the customer needs.
- You are your no1 sales representative

# FIND THE RIGHT PEOPLE TO WORK WITH

- One of the hardest parts of setting up a business is finding the right people to work with.
- You have to expect a lot of staff attrition. This might not be your fault, it is simply a mathematical fact that if the average employee probation success is 70-80%, if you hire 20 people, you will have to dismiss 4-6 people within 1-3 month + people who naturally find other work. When you grow, this problem will persist on all levels of management
- You have to trust them with your money and your reputation
- You have to have a VERY clear line in terms of what you require from your people
- If you are new to the game, this is most likely a trial and error process, you can not create a perfect taskforce/group from the beginning
- You have to be present or have people who represent you and your vision at all times, to ensure your company is put together correctly
- You MUST present clear leadership for your company and subsidiaries. Let them know you care

# THE USE OF TECHNOLOGY

- Open Source hard and software, with well established communities which are not owned by license claiming corporations is always a good start.
- Incorporate and test hard/software whenever possible to ensure the systems work as required
- Build up in-house R&D teams which have determination, skill and passion in their respective fields. These teams are assets to your sales and project management teams
- Stress test hardware in the worst possible conditions - lab testing is NOT field testing and not a substitute for real life deployment.
- You don't want to be first to implement a new technology
- Use tried and tested solutions whenever possible, especially with hardware as you can not update a piece of code if your impeller is broken.
- 5-10% performance increase is not the main driver in developing markets. What people need are solutions which will work in hot, sandy, humid conditions with poor options for service.

# TO SUBCONTRACT OR NOT GENERAL PHILOSOPHY

- Can you create local value/jobs/opportunities/goodwill?
- What are the company/Group goals?
- Is it a one-off project or a ongoing project?
- Will the pain of in-house engineering/building force you to grow? Is it possible and realistic?
- Can you take the pain, do you have the skills and commitment to learn?
- If you do subcontract, do you have the skills to manage your subcontractors? If not you can soon see your money leave your account with no way to get it back.

# OPTION 1 - HIRE SUBCONTRACTORS

- **Pros:**

- Often there are already companies in the marketplace, who (may) have a track record of deployments. These companies can be subcontracted to gain fast access to the market
- Contractors have the required local knowledge, contacts, sources, skills and experience and will make less mistakes (this is the idea)

- **Cons:**

- The subcontractor is gaining valuable IP and knowledge which your company could use
- When you pay a subcontractor you could be paying/creating a future competitor
- Iteration feedback to product development is difficult because the subcontractor has no incentive to share lessons
- Changes, updates to designs/methods can be subject to re-negotiation of contract and maybe not a priority of the subcontractor, maybe not even possible in their current management structure
- Prices often increase over time, as the subcontractor can benefit from your dependence on their services leaving you in a permanent bind

# OPTION 2 - DO IT YOURSELF

- **Pros:**

- We obtain IP which is useful to increase our technology stack across our group companies (Off-Grid Europe, Off-Grid Africa, Much Cooler, IOTEM)
- We can closely support our customers needs and tailor our products to their requirements
- We can iterate and continually improve our products/services/methods because our teams provide feedback to our manufacturing team and this saves costs and time on the installations
- Financially we are supporting the creation of local jobs, R&D and enterprise in our own company
- You will have goodwill from the government as we create local jobs
- Once you perfect the job you did not sub-contract, you have a new revenue stream

- **Cons:**

- It is a massive piece of work to set up a business
- You can end up with huge liabilities in the form of personnel, machinery and property which has a fixed burn rate should your cashflow become reduced
- You carry 100% of the responsibility if things don't work out (that also applies when you subcontract)

# OVERCOME THIS!

## The Dunning Kruger Effect

[vishal@safalniveshak.com]

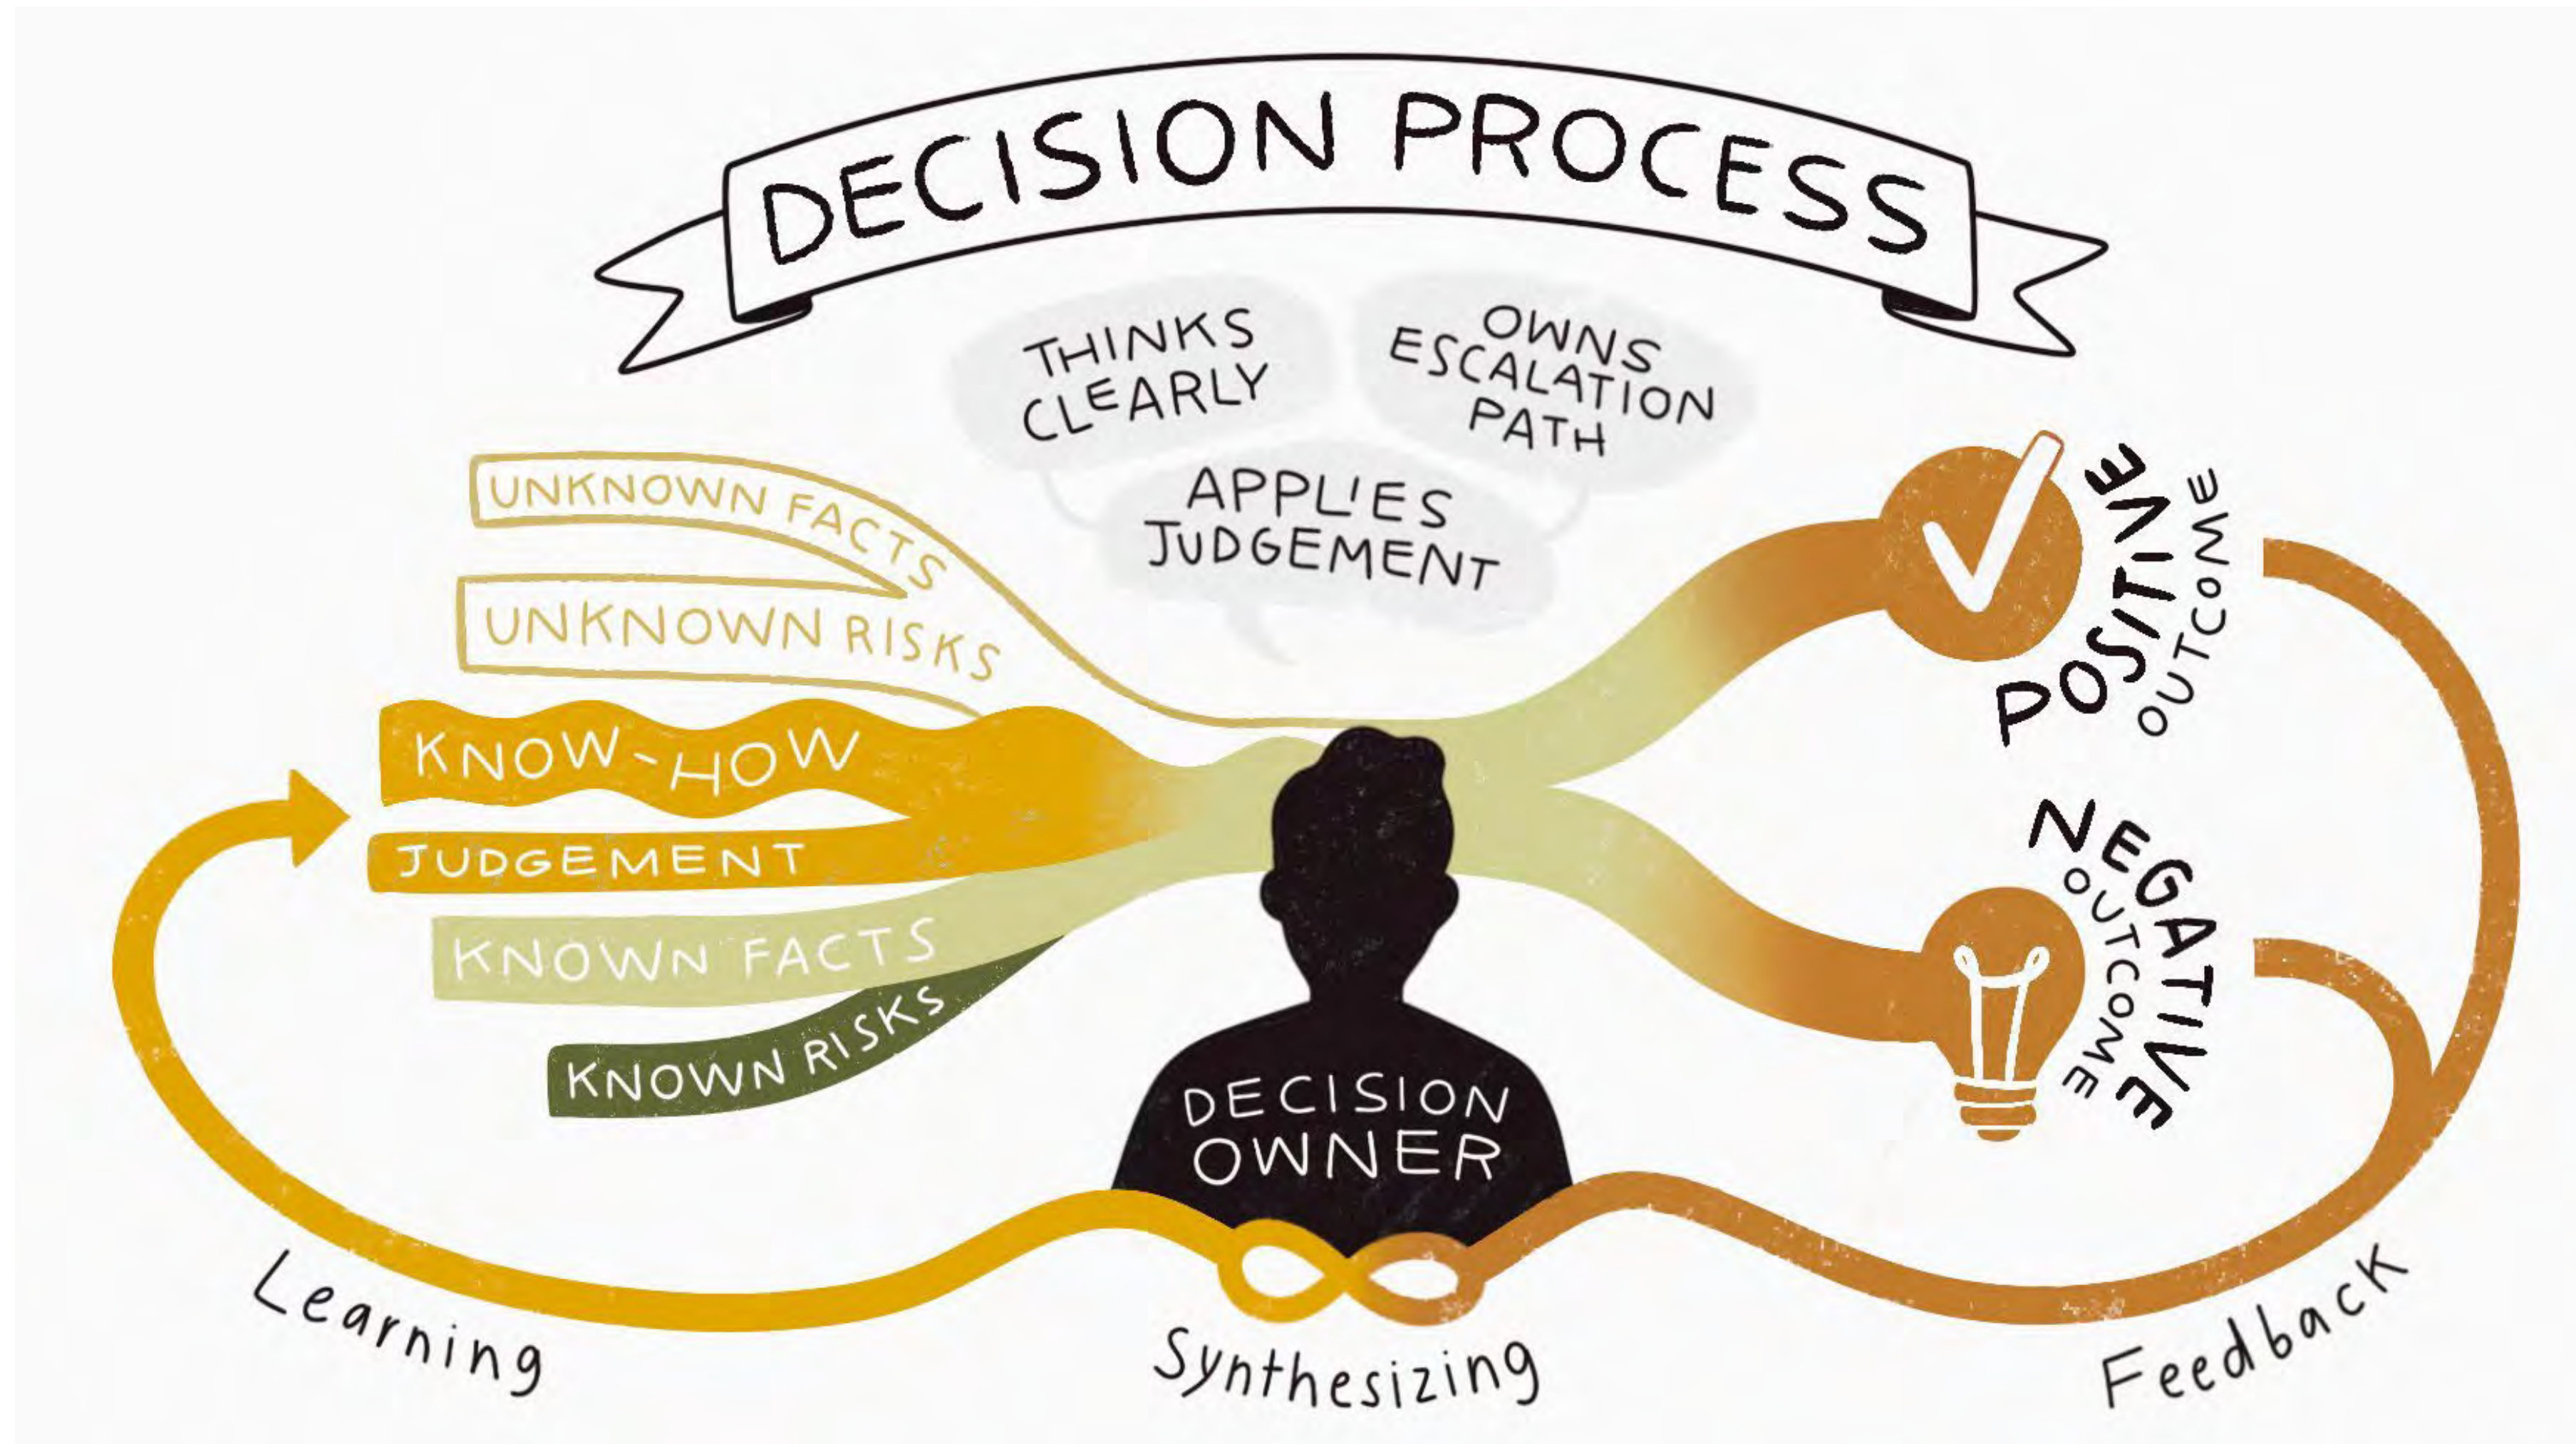

# TAKING CHANCE AND MANAGING RISK

- Being wrong is an opportunity to learn
- Make a decision based on your instinct, based on the information you have available at the time
- Decisions lead to valuable information and eliminate ways which don't work

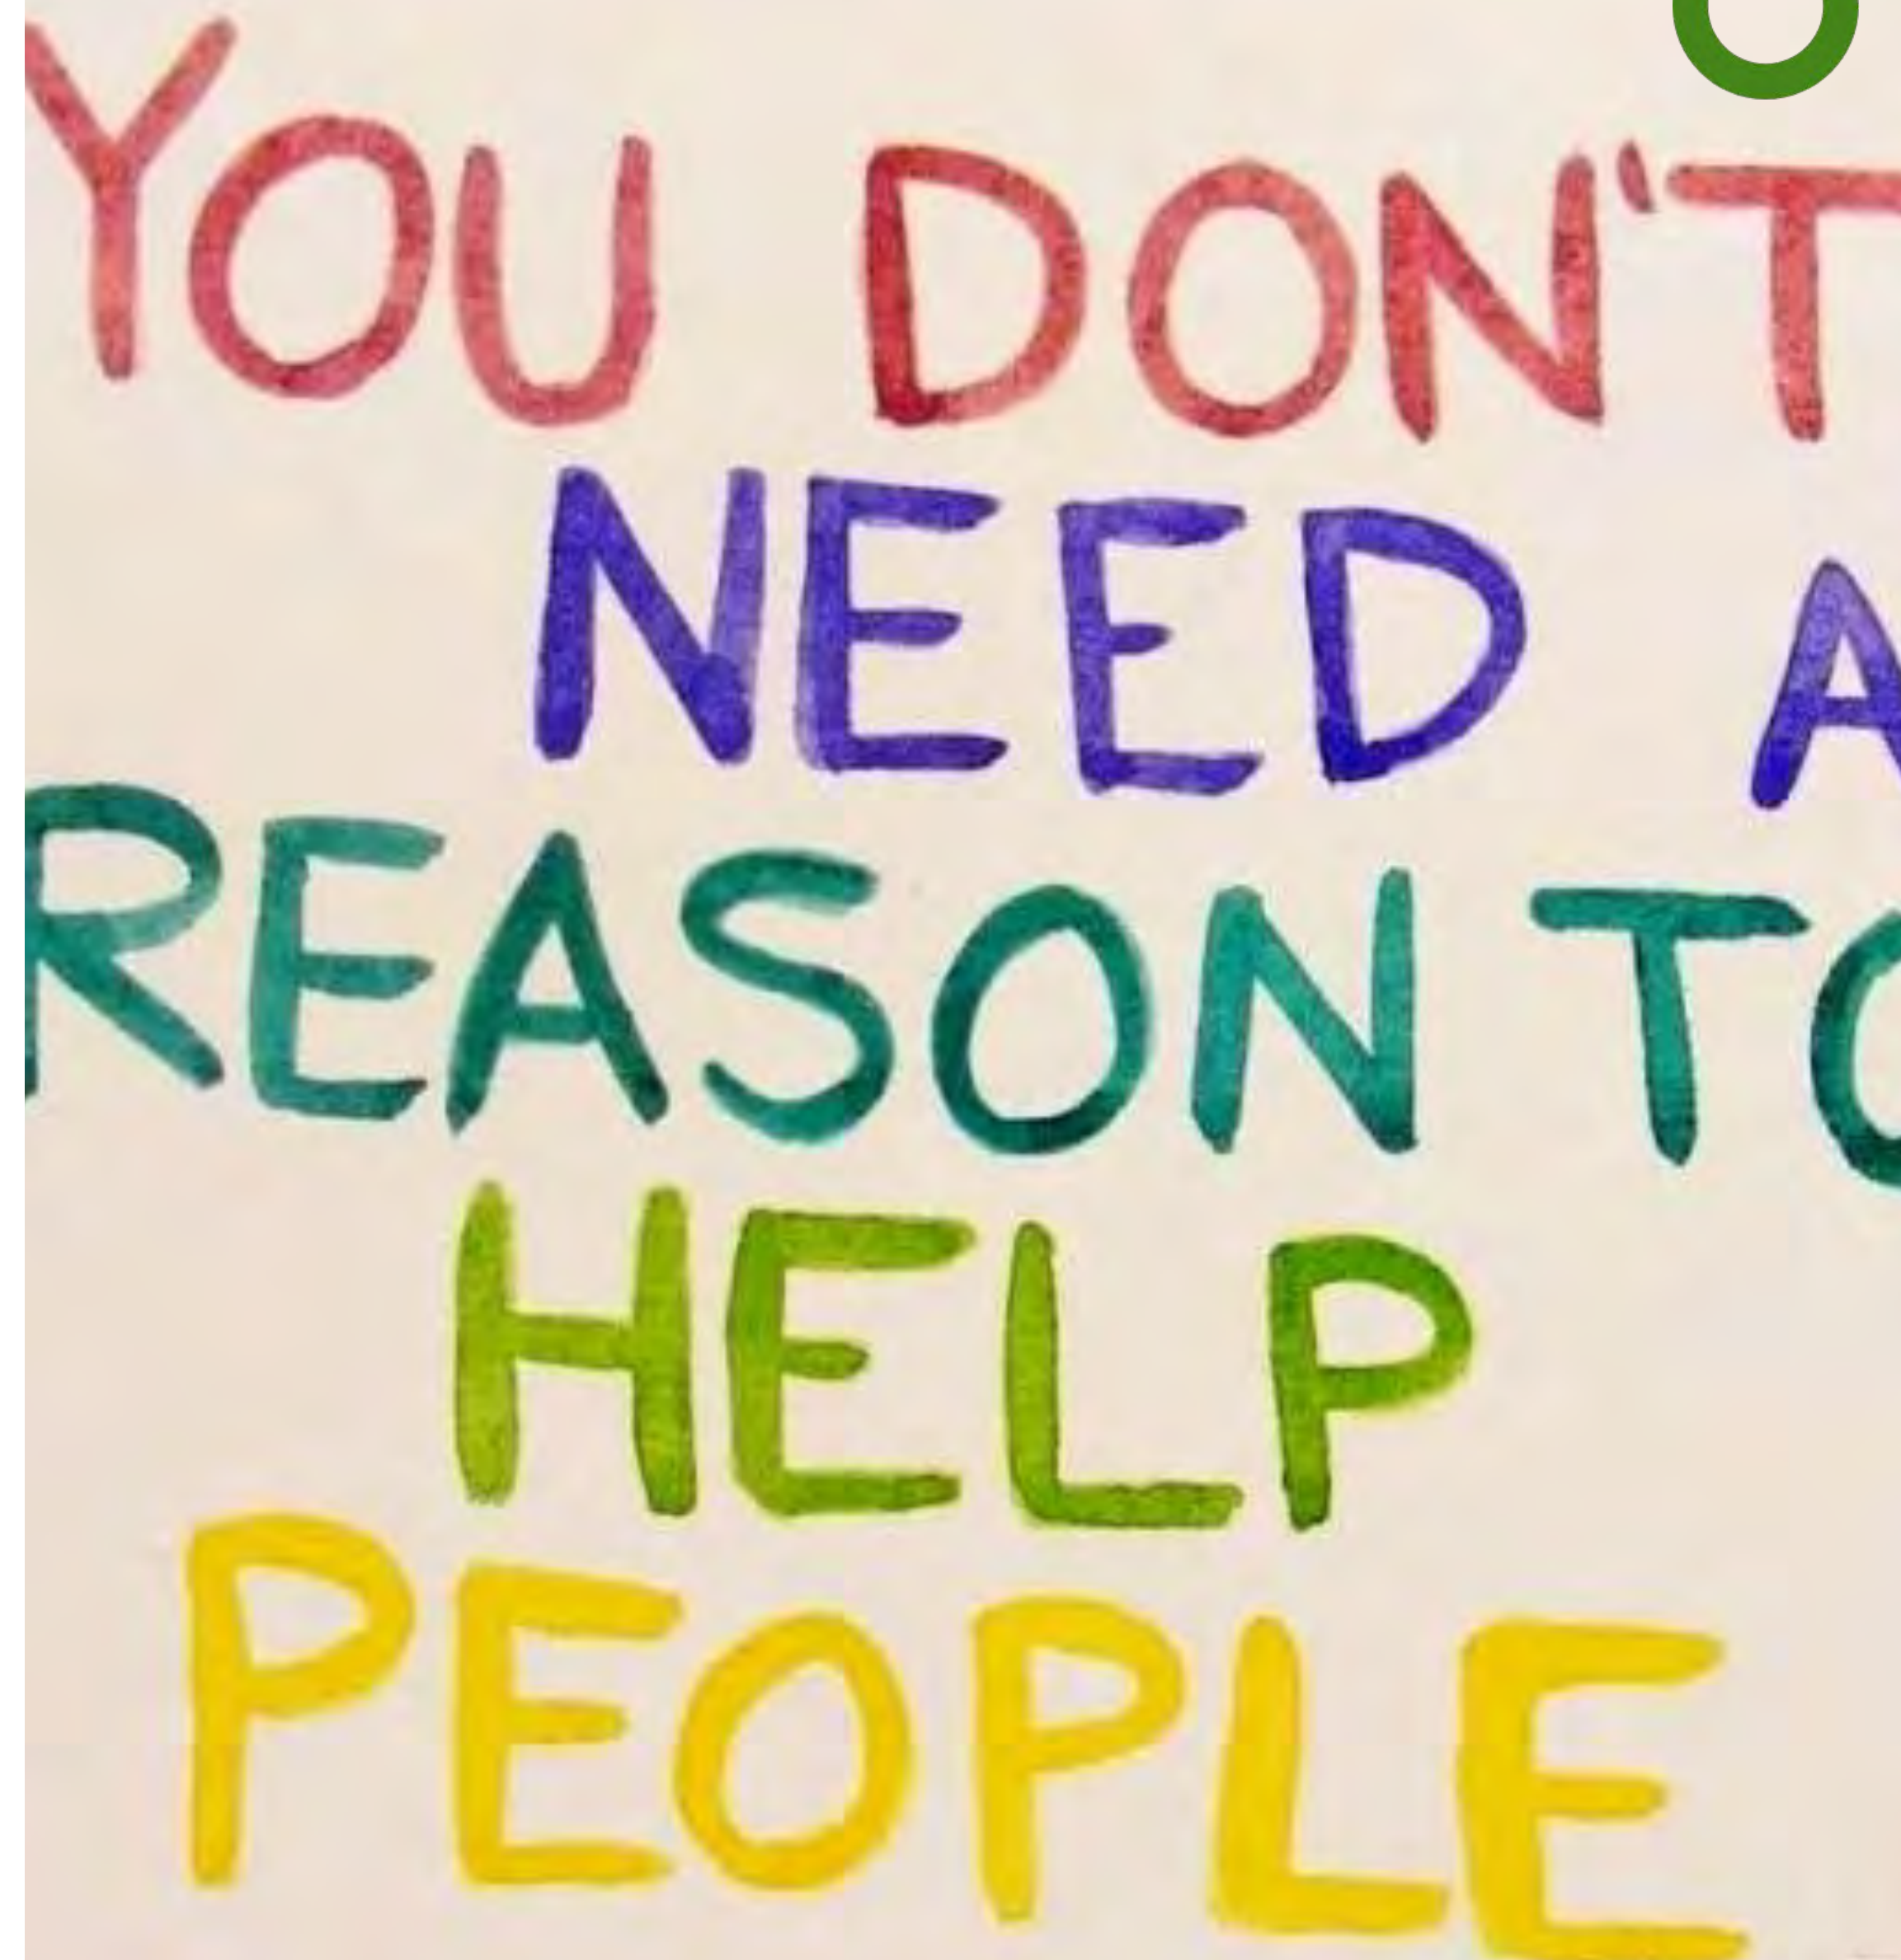

# MAKE DECISIONS AND OWN THEM. BOTH, GOOD AND BAD!

# INSPIRE AND LISTEN TO PEOPLE!

- Help people achieve their goals and dreams
- Help people to find their dreams and who they are, not who you want them to be
- Take the time to understand when you are given valuable information which can benefit your goals and appreciate the source
- Foster care and respect around you.
- The behaviour of the people you work with, will determine you are and what your company culture is

A vertical image showing a handwritten quote on a light-colored surface. The text is written in large, colorful, block letters. The words are arranged in five lines: 'YOU DON'T' (red), 'NEED A' (purple), 'REASON TO' (teal), 'HELP' (light green), and 'PEOPLE' (yellow). In the top right corner, there is a small green circular logo with a white dot inside. At the bottom right, the name 'Chebse' is written in a cursive script.

YOU DON'T  
NEED A  
REASON TO  
HELP  
PEOPLE

Chebse

# NEVER GIVE UP!

- Your target is sometimes closer than it seems.
- You only know this when you reach it
- You are always one step closer to achieve your goals. Especially when it feels like you took two steps backwards
- Once you give up, you will make no more progress

## SUBSIDIARY

---

Installation, commissioning, maintenance  
Off-Grid Africa, Dakar, Senegal (founded 2020).

## JOINT VENTURE

---

Voltares Africa  
(together with: Voltares Africa Emergence Group).  
Financing energy projects in Africa.

## MUCH COOLER

---

Solar powered cooling warehouse for food  
security, price stability, food quality.

# OFF-GRID EUROPE Software

## OFF-GRID CONTROLLER

Innovative and intuitive system design and layout, 100% off-grid enabled Integration of Deep Learning and edge computing through our energy management platform.

Fast frequency and voltage reaction.  
Continuous monitoring, control and load balancing in real time.  
Designed for the Internet of Things (IoT).

Future system expansions implemented through software updates to improve performance and to add additional service and function (i.e. crypto currency).

PV / grid / generator management for optimal return of investment and lifetime.
